

OMAR NOURI

Senior Data Scientist | AI & MLOps | NLP & Generative AI
omar.nouri98@gmail.com | +212 6 20 21 79 30 | Tangier, Morocco

Open to relocation worldwide | Available immediately

PROFILE

Senior Data Scientist with 4+ years of experience developing and industrialising AI models in production, across demanding sectors including banking, insurance, and fintech. Hands-on expertise in NLP, LLMs, generative architectures, and MLOps, with a strong track record of scoping and delivering end-to-end AI use cases. Comfortable working autonomously and communicating complex AI concepts to non-technical business stakeholders. Open to relocation and eager to contribute to the structuring of a high-ambition Data Science practice.

CORE COMPETENCIES

Machine Learning & Deep Learning

Predictive modelling, classification, clustering, regression, time series, recommender systems

NLP & Generative AI

LLMs (GPT, LLaMA, Claude), RAG, Prompt Engineering, Transformers, BERT, NER, Seq2Seq, Language Modelling

Frameworks & Languages

Python, SQL, JavaScript
PyTorch, TensorFlow, Keras, Scikit-Learn,
Hugging Face, LangChain, FastAPI, RASA

MLOps & Cloud

MLflow, Docker, Apache Airflow, CI/CD
(Bitbucket), AWS (Lambda, S3, Textract, Step Functions), GCP

Data & Databases

MySQL, PostgreSQL, MongoDB, SQLite, Neo4j
ETL Pipelines (Airflow, KNIME, Pentaho, Talend)

BI & Visualisation

Power BI, Tableau, QlikView

PROFESSIONAL EXPERIENCE

Data Scientist / ML Engineer | DXC Technology | Rabat, Morocco (Hybrid)

January 2024 – Present

- Scoped and deployed end-to-end AI use cases in insurance: prediction, scoring, document intelligence — from conception to production on AWS
- Architected and optimised a production RAG system (hybrid search, reranking, prompt engineering) — cutting response latency by 10s and improving accuracy by 20%
- Built the first agentic flow POC on top of the RAG system using tool use / function calling, enabling the LLM to dynamically invoke external tools
- Designed and delivered a PII redaction pipeline for insurance and financial documents (names, emails, phone numbers, free text) combining LLMs, rule-based extraction, and AWS serverless architecture (Textract, Step Functions, Lambda) — enabling secure document sharing at scale
- Currently developing a PII extraction system to automatically identify and classify sensitive entities across heterogeneous unstructured document types
- Active R&D on frontier LLM techniques and agentic architectures; presented new AI use cases to business stakeholders

Data Scientist — AI & NLP | Digital Place | Tangier, Morocco (On-site)

October 2021 – December 2023

- Won the national Fintech Catalyst challenge by building a Darija-dialect conversational banking assistant (RASA + custom NLP models) — demonstrated to clients at GITEX
- Deployed French and Arabic NLP transcription models achieving 95% accuracy, integrated into a banking app serving 10,000+ active users
- Built Airflow ETL pipelines processing 500,000+ job postings; applied BERT, GPT, LLaMA for classification, skill extraction, and semantic recommendations

- Trained end-clients on deployed AI solutions; built automated Power BI dashboards for executive reporting

Data Engineer Intern | Digital Place | Tangier, Morocco (On-site)

March 2021 – September 2021

- Built the first data scraping and analysis pipelines covering 100,000+ Moroccan job listings
- Designed and optimised a MySQL schema for structured storage and large-scale insight extraction

KEY PROJECTS

Insurance AI Assistant — RAG + Agentic Flow POC (DXC Technology, 2024–Present)

- Production document Q&A system on AWS; hybrid retrieval, reranking, extended into an agentic workflow with function calling

PII Redaction & Extraction Pipeline (DXC Technology, 2024–Present)

- Automated redaction of personal data on insurance/financial documents via LLMs + rules + AWS serverless stack; extraction system in progress

Darija Smart Banking Assistant (Digital Place, 2023)

- Fine-tuned Meta Wav2Vec on Darija dialect; action-based RASA assistant — winner of national Fintech Catalyst challenge

Job Market Intelligence Platform — Prodige / Mouakaba (2022)

- Automated Airflow pipelines processing 500K+ job postings; classification & skill extraction models; Power BI dashboards for market insights

AI-Enhanced Startup Search Engine (2022)

- Fine-tuned an attention-based RNN on startup descriptions to generate semantic keywords and recommendations, improving search relevance

EDUCATION

State Engineer Diploma (MSc equivalent) — Computer Engineering, Information Systems

University of Abdelmalek Essaadi — ENSA Tangier, Morocco | September 2021

Baccalaureate — Mathematical Sciences (Option B)

AL Amana Institute, Tangier | June 2015

LANGUAGES

Arabic: Native **French:** Fluent — DALF C1 **English:** Professional Proficiency
